

Rural Electrification with Stirling Engines at Small Biogas Plants

- Areas of application

- Problem fields

- First realisations

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Supply of remote areas

Hybrid Utility Systems:

- modulare setup
- photovoltaic systems
- combustion engine
- accumulator

- inverter module
- coupling on the AC side
- expandable structure

Biogas as an energy supplier

Quelle: H. Schulz „Biogas Praxis“

Small Biogas Plants

- multiple available
- established procedure
- logistic benefits

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Combustion Engine

Stirling Engine:

- external heat input
- sturdy technology
- continuous combustion
- low noise emissions

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Stirling Engine

5/11

WhisperGen MCHP

Technological Data:

- electrical output 750 W
- thermal output 6 kW
- fuel provided 8 kW
- 1,4 m³/h biogas (60/40)
- pressure 20 mbar_ü

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Varying Gas Quality

6/11

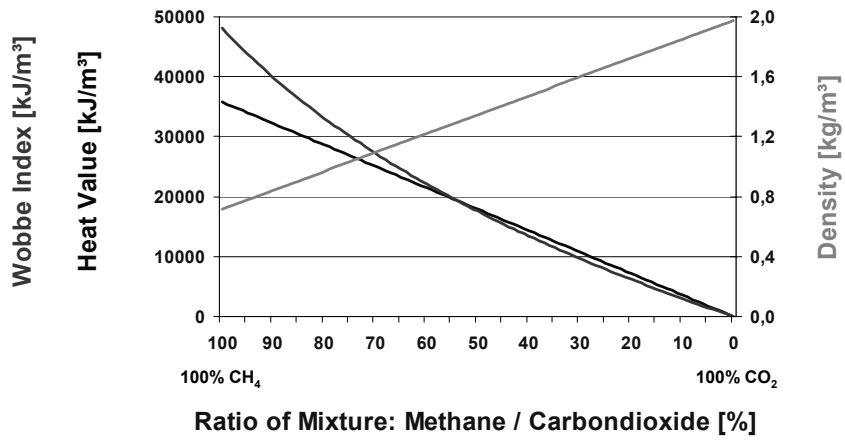

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Change of fuel characteristics

7/11

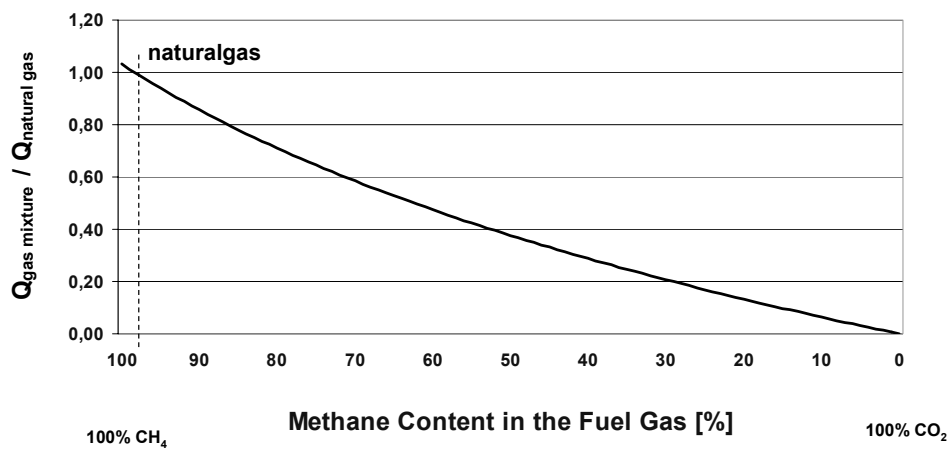

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Decrease of the transferable heat energy

8/11

Verein an der Universität Kassel

Workpackages

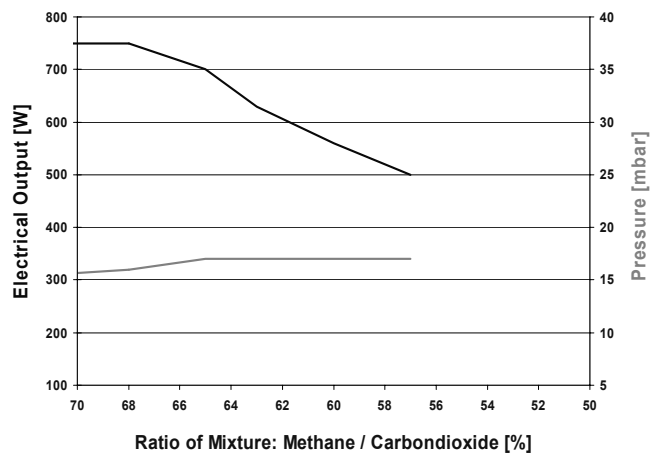

- limit for stable operation as a function of the heating value
- limit for starting ability as a function of the heating value
- engine output variation as a function of the heating value

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

First Realisations

Change of power output with variation of the gas quality

Institut für Solare Energieversorgungstechnik
Verein an der Universität Kassel

Possible Measures

Adjustments to the varying gas quality:

during operation adjustment of the fuel mass flow

- increase of the fuel pressure
- use of a variable nozzle

during start-up

- preheating of the combustion air
- determination of the starting fuel mass flow
